

## Default Run:

To run console application with default parameters:

- From the */bin* directory execute *java WarpDevMain*
- This will run the *generate\_file* method then the *run\_attack* method in that order.  
i.e file will be generated as *dict.txt*

## Generating file method:

To run *generate\_file* method of the console application:

- From the */bin* directory execute *java WarpDevMain generate\_file <<fileName>>*
- This will run the *generate\_file* method with the generated file name being *<<fileName>>.txt* if specified, *dict.txt* otherwise.

## Running attack on the API:

To run *run\_attack* method of the console application:

- From the */bin* director execute *java WarpDevMain run\_attack <<fileName>>*
- This will run the *run\_attack* method from the word in the *<<fileName>>.txt* file if specified, *dict.txt* otherwise.

## Files mapping:

- Source code files may be found on the */src* directory.
- Class files may be found on the */bin* directory.
- *dict.txt* file may be found on the */files* directory.
